

TEAM-02 TCP/ IP Communication

Team Contribution Record

Project: TCP/IP Network Communication Presentation

Team Participation

The project was originally intended to be completed by a team of five members. However, only two members actively participated in the preparation and delivery of the presentation. The two participating members shared the research, preparation, presentation, and technical explanation responsibilities.

Member	Student ID	Presentation Sections	Contribution
Maryjudith Chidinma Ogunaka	C11/26/FCDF/17151	Introduction and TCP/IP Layers	Presented the title and introduction, introduced the selected communication scenario, and explained the Application, Transport, Internet, and Network Access layers of the TCP/IP model.
Abdul Fatawu Umar	2026/FCDF/16899	Packet Journey, Protocols and Troubleshooting	Presented encapsulation and decapsulation, TCP/IP-to-OSI mapping, TCP vs UDP comparison, the packet journey diagram, troubleshooting analysis, and the conclusion.

Evidence of Contribution

We both contributed to the preparation and delivery of the final presentation. Our contributions are demonstrated through the allocated presentation sections and in the completed group presentation recording.

Team Participation Note

Although the original team was expected to consist of five members, only the two of us participated in the project and completed the presentation. The presentation was therefore prepared and delivered jointly by us.
